## BUILT ON PERFORMANCE

Angon Energy Services has been turning up performance in construction, maintenance, turnarounds and safety services for decades.

## MILLER INTEGRATED SOLUTIONS PROVIDES THE 'COMPLETE PACKAGE'

By combining construction and mechanical services with industrial cleaning and environmental services, Miller Integrated Solutions provides the complete package of services that covers everything from newfield construction to brownfield remediation.

## FEATURES

Makovich strives to position Calfee as energy transition leader

ExxonMobil's Eckhart Port Allen Cluster ready for 'exciting growth'

CPChem's Plazac Demand for plastics will continue to grow

Baystar's Chamberlain provides update for Texas projects

Dew's Sampson: 'Path to zero' is smart, affordable

Industry leaders offer procurement tips to potential vendors

Reimagining procurement for the 'new normal'

Long-run energy considerations are impacting today's prices

Do present trends threaten the future of FCC units?

INEOS, CPChem execs reflect on lessons of past year

How to overcome obstacles to technological transitions

Pandemic was 'eye-opening' for turnaround planning

CPChem's Plazac addresses future of sustainability, plastics

TURN UP PERFORMANCE

## NEW PRODUCTS & SERVICES

### USA Industries introduces GripSafe® ST

HOUSTON — USA Industries has released its all new, patented GripSafe® ST piping isolation and testing plugs. Used in applications such as weld testing of flange-to-pipe connections, pipe spool testing and open-ended pipe isolation, GripSafe ST offers superior technology with unrivaled safety and reliability advantages.

GripSafe ST virtually eliminates the risk of dangerous plug movement or ejection with its independently actuated wedge system. Two of the plug models include an automatic

gripping feature, allowing the plugs to hold backpressure from the moment it is inserted into the pipe.

GripSafe ST also uses specially designed wedges that do not penetrate the pipe wall, thus avoiding pipe damage caused by gripping components with serrated edges. The wedges feature Gritlock™, a proprietary coating, that can be used across any pipe alloy without carbon contamination. TriFly™ high-performance seals offer increased durability and reduce shape fatigue.

For more information, visit [www.usaindustries.com](http://www.usaindustries.com) or call (713) 941-3797.

USA Industries' GripSafe® ST is a technologically advanced solution for piping isolation and testing plugs.

### CIRCON now equipped to process NESHAP-designated waste

LAPORTE, Texas — Located within miles of the Houston Ship Channel, CIRCON Environmental's Resource Conservation and Recovery Act Part-B permitted Bay Park facility has been upgraded to receive and sustainably process National Emission Standards for Hazardous Air Pollutants (NESHAP) designated bulk and containerized waste and

wastewaters.

This designation is applied to benzene waste streams generated by chemical manufacturing plants and petroleum refineries, among others. A brand-new structure at CIRCON's Treatment, Storage and Disposal Facility ensures the safe capture of VOCs when handling these streams; meters and automated monitors keep all operations within compliance of the EPA's strict regulations.

The service expansion brings additional benefits to clients who've come to rely on CIRCON's sustainable results. Recovered hydrocarbon from NESHAP materials are ultimately used in CIRCON's waste-derived fuels, bringing sustainable power to the cement kiln industry, and recovered water is recycled and returned to the Gulf Coast Authority for safe use.

For more information, visit [www.circonenviro.com](http://www.circonenviro.com) or call (281) 474-4210.

### Nationwide Boiler offers three new firetube boilers

FREMONT, Calif. — Nationwide Boiler has three new 200-horsepower, 200-psi design, Superior package fire-

tube boilers available for quick ship and immediate needs. These skid-mounted boilers are a 2-pass wetback design and include XID boiler tubes for better heat transfer, higher efficiency and a smaller physical footprint. Each boiler is equipped with a Webster low-NO<sub>x</sub> burner capable of firing natural gas or No. 2 oil, and a NEMA 4 control panel with a Fireeye burner management system and Allen-Bradley combustion control system. Each boiler was built to comply with VHA Boiler and Plant Safety Device Testing, Fourth Edition.

All three boilers are in stock and available for purchase now.

For more information, contact Nationwide at (800) 227-1996 or [info@nationwideboiler.com](mailto:info@nationwideboiler.com).
